

Salesforce Database Volunteer Description

The Salesforce Database Volunteer is responsible for assisting Goodwill staff with migration of donor data from various databases into Salesforce.

Goodwill Sacramento has recently partnered with several nonprofits in the communities we serve, and we are in the process of migrating all the database records from each of the NPOs into one centralized Salesforce database. We have been cleaning up the data to ready it for import, but need assistance with the actual migration. We are looking for a volunteer who could help us:

- Manage data migration projects from kick-off to go-live
- Conduct data discovery of client data sources, such as flat files or databases
- Map source data into Salesforce
- Execute data migrations using SQL or other scripting languages to extract, manipulate, and import data
- Help us streamline or automate repetitive processes

We estimate that this project could take anywhere from several hours to a few days, as there are several sources of historical data needing to be imported.
